Mel'nikov, N. I.
IN REGARD TO REGIONALIZATION OF VARIETIES
(WHEAT) (K Voprosu o Rayonirovani Sortov).
5 Jan 61, Sp. Trans. A-1230.
Order from LC or SLA ml\$1.80, ph\$1.80 61-15853

Trans. of Selektziya i Semenovodstvo (USSR) 1956,
v. 21, no. 5, p. 47-48.

The practice of rating the prospective yielding capacity of wheat varieties is unsatisfactory because there is a great difference between the standard of agrotechnique used on the fields of selection establishments and of varietal plots and the general level of agrotechnics in agricultural production. In the regionalizing of new varieties of winter wheat it is more correct to proceed from data of the yield, which was obtained from plots with the non-fallowed background which corresponds in fertility to the high agricultural background under production conditions; in testing over a high agricultural background varieties are brought to light, which can be recommended for the leading farms.

1961 [v. 26] no. 1, p. 52-53.

DESCRIPTORS: *Plants (Botany), Cereals, Albumins,
Selection.

Vetchlings are cultivated for hay and green feed
for cattle and pigs. Because of its comparatively
short vegetative period, the vetchling is used as
a fallow crop and can also be grown for acquiring
seeds. An investigation of about 400 samples of
(Agriculture--Plant Cultivation, TT, v. 10, no. 7)

Mitrofanov, S. I.
SELECTIVE FLOTATION. [1960] 14p. M1827.
Order from LC or SLA m182.40, ph53.30 61-13151

Trans. of mono. Spetsialnaya Laboratoriya. Moscow,
1958, table of contents, p. 57-59 (para. 5), p. 60-65
(para. 6) p. 212 (para. 42), p. 672-674 (para. 120).

The extracts presented here relate to the boundary
angle between a bubble (adhering to a glass plate) and
the plate surface, the adherence of a particle to the
bubble, evaluating the selectivity of the flotation, and
the flotation of beryl.
